There are two licensing options that can be purchased for SmartTE:

1. Single Session License Purchase SMARTTE-001 - This allows users to connect a single telnet session to their telnet Host server.
2. Multi Session License Purchase SMARTTE-D-001 - This allows users to connect multiple telnet sessions simultaneously to their Host telnet server.

Device Client Pack

Launcher

Launcher - gives the customer total control over which apps can be run on the device.

BasicTE

BasicTE Android device Terminal Emulation is a simplified alternative for those not yet ready to upgrade to SmartTE.

Enterprise Browser

Enterprise Browser provides corporations the ability to run standard web applications from a controlled environment.

Micro-SD Cards

Honeywell Recommended – ATP Industrial Grade Micro SD Cards

Why ATP Industrial Grade SD?

ATP's SIP (System-In-Packaging) manufacturing process encapsulates all exposed components and points of failure to ensure the products are fully waterproof, shockproof, and ESD (Electro-Static Discharge) proof. ATP Industrial Grade SD/SDHC Cards can withstand at least an operating/storage temperature range of at least -40 to 85 degrees Celsius. In addition to this temperature range, the cards are completely waterproof, dustproof, and ESD (Electro-Static Discharge) proof. All ATP Industrial Grade SD/SDHC cards are produced under a stringent RoHS and Green Package compliant manufacturing process to guarantee a consistent high level of build quality and performance. ATP Industrial SD cards deliver outstanding performance with read speed (seq) up to 18MB/sec and write speed (seq) up to 16MB/sec. All ATP Industrial Grade CF, SD, USB drives, and SSDs are constructed using best-in-class SLC(Single-Level Cell) components with enhanced Error Correction Code(ECC) functions and wear levelling algorithms. This results in MTBF ratings over 2 million hours and the highest write cycle lifetimes in the industry.
