2.1 Pistol grip with UHF and LR scanner addon

If you have purchased the pistol grip, the UHF or LR scanner addon you need to enable the specific function in the settings menu. Follow the steps below:

First you need to enable the pistol grip general function:
1. Navigate to Settings -> User Define -> EMSH Service Settings
2. Enable EMSH service
3. Done!
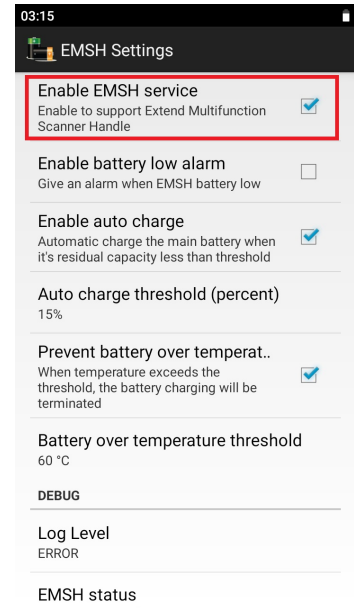

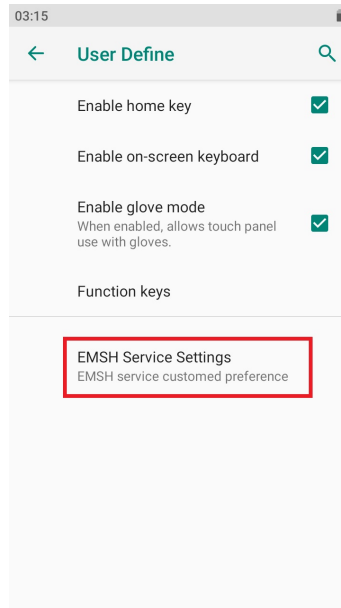

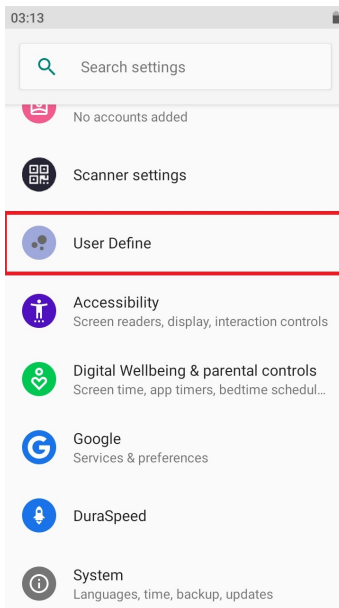

Second if you have purchased the UHF or LR scanner addon you need to activate the specific function:
1. Navigate to Settings -> Scanner settings
2. If you have purchased the pistol grip with UHF you now tick the "UHF" box. If you purchased the LR scanner addon you tick the "long range scanner" box.
3. Done!
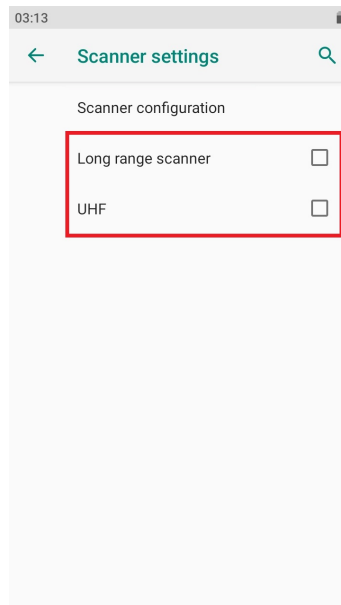

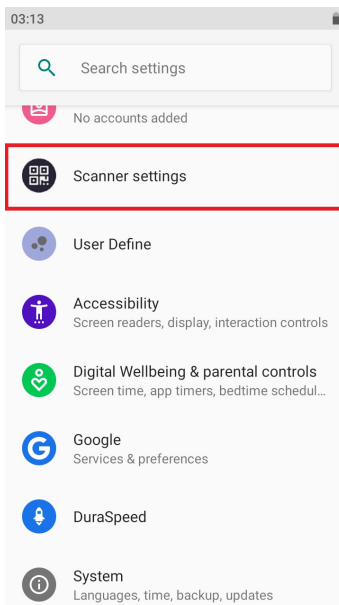

3. USER DEFINE FUNCTIONS

There is a settings menu called "user define" where you can do some specific settings. Let us go through them:
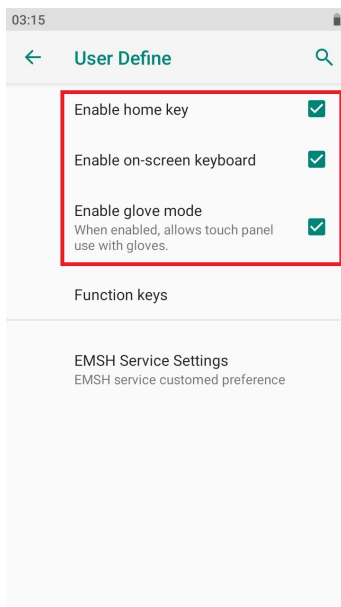

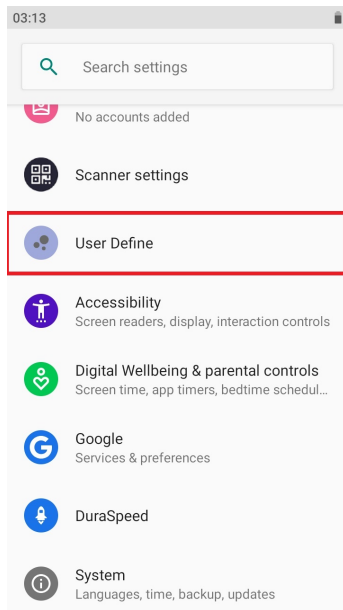

Enable home key
Enable/disable the physical home key.

Enable on-screen keyboard
Enable/disable the on-screen soft keyboard.

Enable glove mode
When enabled, allows touch panel use with gloves.

Function keys

This settings menu allows you to key bind most buttons on the device to whatever suits your application the most. The properties field represents default key bind. The define field represents your current key bind. Simply press the key you are looking to bind/define. This will bring up a new window where you are able to choose a suitable key bind.
